Abstract

A central program comprising a EI program for providing identity information of a user for accessing a network central computer to obtain service(s) or software product(s) or alike, inwhich a secure operation on an account of the user for payment therefor involved; and a ES program for using the presence of the EI program on a computer as a precondition for authorising use of those software products obtained on that computer. The central program is for managing the use of the individual programs therein so that the ES program can be protected from being copied individually.
